

nanovib® 185 cm long reach joint smoothing tool

3m reach : smooth joints of ceilings or walls standing safely on the ground !

USE

° designed and used by interior masons for jointing ceilings and walls after removing formwork.

RISK PREVENTION :

Prevention of risk of bad posture :

- This smoothing tool can be used standing on the ground and does not require the user to work with one hand above the rotator cuff (main cause of MSDs of the shoulder).

- Unlike the traditional method (using a broad knife directly under the slab), this long reach smoothing tool does not require the user to bend the back to place the joint compound and therefore reduces back strain.

Prevention of risk of accident :

- With its long reach of 1.70 the smoothing tool enables the user to work from the ground to a height of up to 3m without needing to use mobile access platforms, thus avoiding the risk for the user of falling from heights.

PRODUCT BENEFITS

Product highlights

- The strong & flexible polymer tubular shaft allows the user to control the pressure applied to the blade and to smooth the joint compound.
- Strong and flexible stainless steel blade.

FURTHER INFORMATIONS

- Greater efficiency : as the tool can be used standing on the ground, the user can move quickly, and so is three times more efficient compared to the traditional method using a mobile access platform.
