

Nanovib® telescopic oiler for forming panels

USE

- ° For oiling and preparing metal forming panels up to 5m in height before pouring concrete.
- ° Also used before storing forming panels to prevent rusting.

PREVENTION OF RISK

° For better posture:

- **Three times as long as a traditional tool:** the Nanovib telescopic oiler enables the user to spread oil on the forming panels/walls up to 5m in height without needing to hold the shaft above the rotatory cuff (main cause of MSD of the shoulder).

° Prevention of risk of accident:

- With its telescopic shaft, the oiler enables the user to avoid using mobile working platform (MEWPs) and therefore prevents all risk of falls from heights by the user.

PRODUCT BENEFITS

Ergonomics

- ° Aluminium shaft : lightweight
- ° Oval tube section for better control

Strength

- ° Ribbed tube made of hardened aluminium with a thickness of 1.5mm.

Product highlights

- ° Reach of up to 5m.

- ° Spare covers are replaceable (consumable product)
- ° Save time : No more time spent cleaning the work area (no more oil spilt on the ground)
- ° Automatic setting handle : locking/unlocking system without trigger.
- ° Quick setting of shaft length by notches every 50cm.
- ° Storage length : 2m: may be stored in a container.

ADDITIONAL INFORMATION

- ° Do not strike or twist tubes as this will stop them sliding inside the tubes.

Spare parts

- ° 896550 : sachet of 5 spare covers

No fall from height

Avoid dripping

Uniform oiling

Save oil
